## Special session on

### Advanced Topics in Big Data Science and Computational Intelligence

IN The 7th International Conference on Frontier Computing (FC 2018)

- Theory, Technologies and Applications

@ JULY 3-6, 2018, KUALA LUMPUR, MALAYSIA

\*\*\*\*\*

Computational Intelligence is the field of learning a specific task from data or experimental observation. In this field, it includes fuzzy logic, neural networks, evolutionary computation, learning theory, and probabilistic methods. Since a computational intelligence algorithm's complexity may vary with different inputs of the same size, the studies of big data science and application is an essential subject in computational intelligence field.

This special session is intended to present and discuss big data science and computational intelligence. The objective of this special issue is to establish the state of the art for the most relevant problems in different application fields and to emphasize new efficient implementations by applying computational intelligence in big data science. It is expected to address and report recent advanced topics in big data science and computational intelligence in both academic researches and real-world applications.

Authors can submit their manuscripts through the Manuscript Tracking System at

<http://fc2018.expectfactory.com/>

**Please write the comment upon submission**

**[This paper is a submission of SS on Advanced Topics in Big Data Science and Computational Intelligence]**

\*\*\*\*\*

Date for full paper submission: March 31, 2018

Notification of acceptance: April 30, 2018

Camera-ready submission due: May 20, 2018

Early-bird registration due: May 20, 2018
